Final Projects
Deep Learning 2023

About the project

1. This project will be 50% of total seminar/practice mark. The goal is to ensure that students are able to apply the materials learned in the labs.

2. There are two kinds of project that students may propose :

   a. Create their own simple project from the scratch

   b. To use existing code, but to apply them to different task or apply a modification to the method.

   c. We give you a list of potential topics (not mandatory to use one of them). Last year presentations are also available at Aula Global.

3. There should not be duplicated topics inside each group (P101/102).

Instructions

1. Project declarations (1st June) :
   a. Students need to select the project that they like, or to propose a new one.

   b. Students need to choose the project topic and fill the google-sheet uploaded to Moodle.

   c. This need to be done before the Seminar session by 29th of May

2. Presentations (14/06 & 15/06)
   a. Student needs to upload the presentation file and provide the link prior the presentations to the shared spreadsheet. Ensure it is shared properly to all group.

   b. Each group will be given ~10 min presentations times followed by 5 mins Q/A

   c. The students need to upload the code to github, and provide the link by the end of June.
